

GPIT Successfully Has Deployed Middleware Solution

GPIT- one of the leading and fastest growing IT companies in Bangladesh, has successfully deployed the Middleware Solution to BRAC Bank. To celebrate this success, a closing ceremony was held at GP House, on 10th April, 2011. The successful completion of the project has opened new avenues for GPIT to broaden its horizons in terms of achieving the desired results of success in the IT industry.

BRAC Bank had its 254+ applications communicating between each other in mesh architecture. GPIT designed a Middleware Service Bus solution for BRAC Bank and implemented the same to ease the application communication procedure with the help of a middleware that provides a common platform and works as glue between two or more applications to enable them to interact. For the project GPIT ensured the deliverables within the agreed time frame and quality. This was a very time bounded project, through which GPIT has proved its strong capabilities to the external business community once again.

GPIT is a subsidiary of Gramenphone Ltd, the leading telecommunication company in Bangladesh. GPIT has more than 400+ top skilled IT resources working together for ensuring quality service to its clients, both locally and internationally.

In these Universities there was a huge response of students about the MSI Laptop.

The next generation Acer Aspire TimelineX Laptops

Once again Acer pushes the boundaries of mobile computing to the extreme, creating a family of notebooks destined to impress. The all-new Aspire TimelineX Series builds on the achievement of the previous generation and reaches unprecedented levels of performance, convenience, connectivity, and battery life.

The next-generation Acer Aspire TimelineX Series is stunning in many ways. From the ultra-thin and smart design, to the powerful processor and graphics, to the advanced audio technology and seamless connectivity, you'll be amazed. The first thing that catches the eye is the new Cobalt Blue aluminium cover that blends with the silver profile to create a futuristic effect. The clean lines, geometric shapes, and smooth angles conjure up a minimalist and ultra-stylish look and feel.

The multi-gesture touchpad, in the same colour as the cover and palm rest, maintains a consistent overall look and feel, yet is easy to spot thanks to the slightly recessed design. On the side, the clear-cut design of the hinge becomes a rich visual element. The next-generation chiclet keyboard, set out on a silver base, makes the operation area look neat and tidy and is easier to clean.

Having achieved the standard of more than 8 hours, the next-generation Aspire TimelineX takes it a step further with as much as 25% more power: up to 10 hours of battery life for an entire day of work and entertainment on a single charge. On top of that, the battery pack boasts a super-long life cycle.

While the power capacity of a conventional battery starts to fade to 80% at around 300 charge cycles, Acer's new long-life battery formula retains 80% capacity for over 1,000 charge cycles. This means up to 4 years of use and translates into fewer battery replacements, which amounts to reduced energy and resources consumption. What's more, the battery is built-in, allowing a thinner, neater design and eliminating any risk of accidentally being released during operation.

The Aspire TimelineX series exceeds any expectations and is extreme in every way, in just one inch.

Acer represented in Bangladesh by Executive Technologies Limited, the only authorized business and service partner of Acer Incorporated, Taiwan. Hotline: 01919-222-222
