Signs that your Mobile Phone might be Hacked !

Dr. Harish Chandar- Founder / Director , INDIATECH – Mumbai – INDIA
Research Assistance : Mr. Nadim Ahmed – CEO , GreenEarth- INDONESIA

We have to accept it , we store all kinds of valuable data in our mobile phone. Contact lists , Bank Logins , Ecommerce Credentials , Emails , Our photos, Important documents and well…. everything in between .

Our Mobile phone is therefore too precious for us and that is the last thing we want hacked !.

While it is not easy to say if your mobile phone has been hacked or not , there are some simple – sure shot ways , to identify the same.

Symptom 1

The Mobile phone runs slow, really slow !!

You know the general speed of your Mobile. So if Malware softwares are running behind the scenes in your device , they will slow down the whole process . Websites will take time to load, Phone will be slow to turn ON or OFF, Messages will be take time to get sent or received and so on .

Symptom 2

Phone Battery gets drained faster … than normal .

Here it is assumed that the battery is ok and normal.

Well then in that case if you find the battery getting drained faster than normal (again ,you know the normal battery drain time) then perhaps there are lots of Apps running in the background or maybe malwares are eating into the battery resources .

Symptom 3

The Phone gets Hotter !

It is normal for the phone to get hotter as we continue to use it for long extended periods. Watching Movies , Playing games and all can really heat up a phone . But , if the Phone gets heated up without any reason , that's a classical symptom of it being hacked.

Symptom 4

Strange Pop -Ups appear on you screen

This is a dead give away ! Adwares , Malwares and Spywares can infect your phone and produce unnecessary Pop - Ups to appear , annoying you .
